Professional Summary

Full-stack engineer with two years at Programiz, a coding-education platform with over 100,000 paid learners, building REST APIs, payments and an LLM-powered tutor in Node.js, TypeScript and Next.js. Led four engineers at Jobss.ai in Melbourne, and a team of three on a warehouse platform and a multi-tenant storefront on PostgreSQL. Now building e-warehouse with AI coding agents in Claude Code. Specs, schema decisions, review and merges stay with me.

Education

Victorian Institute of Technology, Melbourne, VIC *Feb 2024 – Jul 2026*
Master of Information Technology and Systems (Software Engineering)

Softwarica College of IT and E-commerce, Kathmandu, Nepal *Nov 2018 – Oct 2021*
BSc (Hons) Software Engineering

Skills

Languages & Frameworks: TypeScript, JavaScript, Node.js, Express, React, Next.js, Tailwind CSS, Python, Django, PHP, Laravel, SQL
Cloud Platforms: Vercel. Currently learning AWS (EC2, RDS, S3) and Docker
DevOps & Tools: Git, GitHub Actions CI, Playwright, Cypress, Selenium, Postman, Sentry, Jira, Claude Code, firstmate
Databases: PostgreSQL, MySQL, MongoDB, Redis, Drizzle ORM, Sequelize
Practices: REST APIs, RBAC, idempotency, microservices, ADRs, code review, Agile (Scrum), AI-assisted development

Professional Experience

Jobss.ai, Software Engineering Intern, Melbourne *Feb 2026 – May 2026*

- Led four engineers to ship a live Laravel and PHP job and task platform, reviewing 25+ pull requests before merge.
- Built authentication and role-based access control (RBAC) for four user roles, all checked against one permission model.

ParewaLabs (Programiz), Software Engineer, Kathmandu, Nepal *Oct 2021 – Nov 2023*

- Built the course flow REST APIs and learner dashboard in Node.js, TypeScript and MySQL for over 100,000 paid learners.
- Integrated Paddle payments, webhooks and checkout iframe messaging for every paid learner. Still in production.
- Built the certificate engine in Node.js and TypeScript, which has issued over 100,000 verified completion certificates.
- Integrated sensAI, an LLM-powered tutor, into the exercise page. Learners ask it about 300 questions a day.
- Fixed chunked Python output on the online compiler (23M visits/month) with the principal engineer, adding a socket heartbeat that joins the pieces into one response.
- Delivered Programiz Reports in two weeks, leading a Scrum team of six from content-team requirements to release.
- Automated Playwright and Cypress end-to-end tests for the certificate engine and landing pages in GitHub Actions CI.

Projects

e-warehouse, age-aware lot ledger for clothing merchants (pre-launch) *Sep 2026 – Present*

- Built the Node.js, TypeScript, Express and PostgreSQL backend foundation and wrote 10 architecture decision records.
- Kept Express at the edge, with one response envelope, fixed error codes and a request ID on every log line.
- Stored every stock change as a new row, never edited in place, so each lot keeps its full history and age.
- Run parallel AI agents in Claude Code and firstmate. I own schema and API calls, and review all 11 merged PRs.
- Wrote 7 agent skills. Splitting my 145-rule clean-code skill by topic cut a naming task from about 7,400 to 2,200 tokens.

Nexus, warehouse management platform. TypeScript, Node.js, PostgreSQL, Redis, Next.js *Feb 2025 – Jan 2026*

- Architected and specced Nexus and Aroma, and led the team of three that built them with AI. Reviewed 400+ PRs.
- Built a PostgreSQL stock ledger with SELECT FOR UPDATE row locks, so two buyers cannot claim the same unit.
- Modelled product drops and order fulfilment as state machines, with cron jobs batching retail orders.

Aroma, multi-tenant eCommerce storefront. TypeScript, Node.js, PostgreSQL, Redis, Next.js *Mar 2024 – Jan 2026*

- Isolated each seller's storefront on one shared backend, and handed orders to Nexus through a shared Redis instance.
- Built the buyer path in Next.js, from search to checkout and order history, with React Query and Zustand.
- Brought Lighthouse LCP on the product page under 2 seconds by choosing SSR or static generation per page.
- Stopped duplicate orders with an idempotency key, and ran eSewa and Khalti payments as a separate service.
