

SAGAR MISHRA

Melbourne, VIC | 0424 308 228 | sagarcrcoc@gmail.com | [linkedin.com/in/sagar-mishra](https://www.linkedin.com/in/sagar-mishra) | github.com/sagarmsraozil

Full-stack engineer with two years shipping product features at Programiz Pro (100,000+ paid learners) and two years building warehouse and e-commerce platforms end-to-end as personal engineering projects. Comfortable owning features from whiteboard to production, leading small teams, and working across React, Next.js, Node.js, and relational databases. Completing a Master's in Software Engineering at VIT Melbourne.

EXPERIENCE

Software Engineer — ParewaLabs (Programiz)

Oct 2021 – Nov 2023

Coding-education platform — programiz.com and programiz.pro, 100,000+ paid learners

Kathmandu, Nepal

- Led the Programiz Reports project with a team of six engineers and managers — owned scoping, ran whiteboard sessions, and drove delivery from idea to ship.
- Designed and built the interactive course flow and progressive learner dashboard on programiz.pro — the core surface every paid learner uses to take a course.
- Built the certificate engine that automatically issues per-course completion certificates for every learner who finishes a course on the platform.
- Worked on the Python and JavaScript online compilers at programiz.com, used by visitors to run code directly in the browser without installing anything.
- Integrated sensAI, the in-product AI tutor, into the learner experience so students get unblocked when they get stuck mid-exercise.
- Shipped landing pages instrumented with Mixpanel and Microsoft Clarity to track conversion behaviour and inform iteration.

PROJECTS

Nexus — Warehouse Management Platform

Feb 2025 – Jan 2026

Personal project — built from real pain running an anime apparel side business (stock kept going missing, fulfilment was manual). React, Next.js, Node.js, PostgreSQL, Redis.

- Modelled the warehouse as a hierarchical, labelled tree so goods can be located in seconds — the missing-stock problem that triggered the project.
- Built a state-machine workflow for product drops covering supplier onboarding, lot negotiation, intake, and lot-level pricing strategy.
- Implemented lot-aware replenishment with a Return-to-Order path so refunds and exchanges resolve back to the correct inventory state.
- Wrote the order marshalling pipeline that batches retail orders at intervals and tracks each through fulfilment as a state machine.

Aroma — Multi-tenant Clothing E-commerce

Mar 2024 – Jan 2026

Personal project — storefront layer designed to sit on top of Nexus so sellers can run their own shop on shared infrastructure. React, Next.js, Node.js, PostgreSQL.

- Designed the multi-tenant architecture so each seller runs an isolated storefront on shared backend infrastructure.
- Built the buyer journey end-to-end: catalog search, product detail, cart, reservation, checkout, and order history.
- Added a post-purchase order status view so buyers know where their order is — directly addressing the trust gap social-media-only clothing sellers create.

EDUCATION

Victorian Institute of Technology

Melbourne, Australia

Master of Information Technology and Systems — Software Engineering

Feb 2024 – Jul 2026

Softwarica College of IT and E-commerce

Kathmandu, Nepal

BSc (Hons) Software Engineering

Nov 2018 – Oct 2021

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C#, Kotlin

Frameworks: React, Next.js, Node.js, Express, React Query, Drizzle, Mongoose, Sequelize

Data & Infrastructure: PostgreSQL, MySQL, MongoDB, Redis; microservices, monoliths, sharding

Tools: Jira, Asana, Directus, Mixpanel, Microsoft Clarity, Git
