SUMMARY

Full-stack engineer with two years of production work at Programiz, a coding-education platform with over 100,000 paid learners, where I built the course flow, learner dashboard and certificate engine. At Jobss.ai in Melbourne I led four engineers and owned authentication, role-based access and marketplace search in Laravel. During my Master's I built two connected systems: a warehouse platform with lot-level inventory and state-machine fulfilment, and a multi-tenant Next.js storefront that trades stock with it.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, PHP, Python, SQL, HTML, CSS

Frontend: React, Next.js, React Query, Zustand, Tailwind CSS, server-side rendering, static generation, technical SEO

Backend: Node.js, Express, Laravel, Django, REST APIs, authentication, role-based access control, multi-tenancy, state machines

Data: PostgreSQL, MySQL, MongoDB, Redis, Drizzle, Sequelize, schema design, concurrency control, row-level locking, caching

Testing & CI: Playwright, Cypress, end-to-end testing, GitHub Actions

Practices: Agile, Scrum, Kanban, spec-driven development, code review, sprint planning, requirements gathering

Tools: Git, Jira, Trello, Asana, Directus, Mixpanel, Microsoft Clarity, Lighthouse

Currently learning: Docker, AWS (EC2, RDS, S3)

EXPERIENCE

Software Engineering Intern, Jobss.ai | Feb 2026 - May 2026 | Melbourne, VIC

Job and task distribution platform. Laravel, PHP and Blade views built from Figma designs.

- Led four engineers as technical lead. Set the technical direction and ran code review. Nothing merged unread.
- Owned authentication and the role-based access model for employers and job seekers. Every permission check reads from it.
- Designed the employer workspace, where an employer posts a job and moves applicants through review, shortlist and rejection.
- Built marketplace search on one index. Employers looking for people and seekers looking for work query the same system.

Software Engineer, ParewaLabs (Programiz) | Oct 2021 - Nov 2023 | Kathmandu, Nepal

Coding-education platform with over 100,000 paid learners.

- Built the course flow and learner dashboard on programiz.pro. Every paid learner goes through them to finish a course.
- Built the certificate engine, which has issued over 100,000 verified completion certificates.
- Led Programiz Reports, a feature for beginners learning to program, with a team of six on a Scrum cycle. Gathered the requirements, owned the scope, ran sprint planning and took it from proposal to release.
- Wrote end-to-end tests in Playwright and Cypress and ran them in a GitHub Actions CI workflow.
- Integrated sensAI, the in-product tutor, so a learner gets help inside the exercise they are stuck on.
- Instrumented landing pages with Mixpanel and Microsoft Clarity, then rewrote them around what the behaviour data showed.

PROJECTS

Both built with spec-driven development. I write the spike, reference implementation and spec myself, then AI models plan and implement against the frozen spec. I read every change before it merges.

Nexus, Warehouse management platform | Feb 2025 - Jan 2026

React, Next.js, Node.js, PostgreSQL, Redis. Trades stock and order state with Aroma.

- Modelled the warehouse as a labelled tree, so every item resolves to one labelled location. Built it after running an apparel business where stock went missing and fulfilment was manual.
- Modelled product drops as a state machine through supplier onboarding, lot negotiation, intake and pricing. No step gets skipped.
- Recorded stock movements in a PostgreSQL ledger with SELECT FOR UPDATE row locks, so two buyers cannot claim one unit.
- Wrote the fulfilment pipeline. It batches retail orders on a timer and tracks each order as its own state machine.

Aroma, Multi-tenant clothing storefront | Mar 2024 - Jan 2026

React, Next.js, Node.js, PostgreSQL, Directus. Trades stock with Nexus.

- Designed the tenancy model so each seller runs an isolated storefront on one shared backend.
- Built the buyer path front to back: search, product pages, cart, reservation, checkout and order history.
- Split rendering by page. Catalogue pages use server-side rendering and static generation so they get indexed and load fast. The client fetches per-user data, with React Query holding the cache and Zustand holding cart state.
- Tested the product details page in Lighthouse. Largest Contentful Paint (LCP) came in under 2 seconds.

EDUCATION

Master of Information Technology and Systems (Software Engineering), Victorian Institute of Technology | Feb 2024 - Jul 2026

BSc (Hons) Software Engineering, Softwarica College of IT and E-commerce, Kathmandu, Nepal | Nov 2018 - Oct 2021
